Author Note: Mr. Farzad Radmehr has a BS and an MS degree in Industrial Engineering from University of Tehran, Tehran, Iran. He is currently pursuing a Ph.D. degree in Industrial Engineering at West Virginia University (WVU). Dr. Ahluwalia is professor of Industrial Engineering at WVU. His areas of interest include Quality and Reliability Engineering, Information Management, and Manufacturing Systems. He is a registered Professional Engineer (PE) in West Virginia, a fellow of the American Society for Quality, and a life senior member of the Institute for Electrical & Electronics Engineers (IEEE).

Abstract: This paper presents a hybrid approach to forecasting. It applies Bayesian method to outputs generated by a heuristics forecasting method, such as Artificial Neural Network (ANN). The proposed technique was applied to forecast production levels of an oil reservoir.

Keywords: Hybrid Bayesian Model (HBM), Artificial Neural Network (ANN), Oil Production Levels
